

Soft Computing and Machine Intelligence Journal Vol (X), Issue (X), 20XX

Title of the article for SCMI journal submission

First Author ^a, Second Author ^a and Last Author ^{b,*}

- (a) Full address of first Affiliation (a) including city and country
- (b) Full address of first Affiliation (b) including city and country
- * Corresponding author: Email address of the Corresponding author
- Abstract: The abstract is a single paragraph of about 200 words maximum. For research
- ² articles, abstracts should give a pertinent overview of the work. We strongly encourage
- a uthors to use the following style of structured abstracts, without headings: Background,
- 4 Methods, Results, and Conclusion. The abstract should be an objective representation
- ⁵ of the article; it must not contain results that are not presented and substantiated in the
- main text and should not exaggerate the main conclusions. The abstract is supposed
- 7 to cover background and existed issues (10% of abstract), what you have proposed
- (15%), describe the solution procedure in detail (45%), and describe the experiment's
- performance, efficiency, etc. (30%).
- **Keywords:** keyword 1; keyword 2; keyword 3; keyword 3

11 1. Introduction

The introduction should concisely place the study in a comprehensive meaning and highlight why it is essential. It should describe the scope of the work and its importance. The current state of the research field should be evaluated thoroughly, and key publications cited. Please highlight controversial and diverging hypotheses when necessary. Conclusively state the main aim of the work and highlight the principal conclusions. As far as possible, please keep the introduction comprehensible to scientists outside your particular field of research. Citing a journal paper [1]. Moreover, now citing a book reference [4].

¹⁹ 2. Results

This section may be divided by subheadings. It should provide a concise and precise description of the experimental results, their interpretation, and the experimental conclusions are drawn.

- ²² This section may be divided by subheadings. It should provide a concise and precise
- description of the experimental results, their interpretation, and the experimental conclusions
- 24 are drawn.
- 25 2.1. Subsection
- 26 2.1.1. Subsubsection
- ²⁷ Bulleted lists look like this:
- First bullet
- Second bullet
- Third bullet
- ³¹ Numbered lists can be added as follows:

- 32 1. First item
- 33 2. Second item
- 34 3. Third item
- ³⁵ The text continues here.
- 36 2.2. Figures, Tables, and Schemes
- All figures and tables should be cited in the main text as Figure 1, Table 1, etc.

Figure 1. This is a figure; schemes follow the same formatting. If there are multiple panels, they should be listed as (a) Description of what is contained in the first panel. (b) Description of what is contained in the second panel.

Table 1. This is a table caption.

Title 1	Title 2	Title 3
entry 1	data	data
entry 2	data	data

- *2.3. Formatting of Mathematical Components*
- ⁴³ This is an example of an equation:

$$x \times y \sum z = d \tag{1}$$

Please punctuate equations as regular text. Theorem-type environments (including propositions,

⁴⁵ lemmas, corollaries, etc.) can be formatted as follows:

Theorem 1. *Example text of a theorem.*

⁴⁷ The text continues here. Proofs must be formatted as follows:

Proof of Theorem 1. Text of the proof. Note that the phrase 'of Theorem 1' is optional if it is clear
which theorem is being referred to.

⁵⁰ The text continues here.

3. Discussion

Writers should present the results and how they can be interpreted from former studies and effective hypotheses. The conclusions and their associations should be discussed in the most comprehensive context possible. Future research directions may also be highlighted.

4. Conclusions 55

The conclusion is a summary of the main ideas that come out of the discussion. This section is not 56

mandatory but can be added to the manuscript if the discussion is unusually long or complex. 57

Acknowledgments: In this section, the authors can acknowledge any support given. This may include 58 administrative and technical support or funding. . 59

Appendix A 60

Appendix A.1 61

The appendix is an elective segment that can include features and data supplemental to the main 62 text. For example, descriptions of experimental features that would disrupt the main text's flow remain 63 crucial to understanding and reproducing the research shown; figures of replicates for experiments of 64 which representative data is shown in the main text can be added here brief, or as Supplementary data. 65 Mathematical proofs of results not central to the paper can be added as an appendix. 66

Appendix B 67

All appendix sections must be cited in the main text. In the appendixes, Figures, Tables, etc., should be labeled starting with 'A,' e.g., Figure A1, Figure A2, etc.
